

 **CHANNEL VISION™**
10 Year Limited Warranty

Channel Vision Technology will repair or replace any defect in material or workmanship which occurs during normal use of this product with new or rebuilt parts, free of charge in the USA, for ten years from the date of original purchase. This is a no hassle warranty with no mail in warranty card needed. This warranty does not cover damages in shipment, failures caused by other products not supplied by Channel Vision Technology, or failures due to accident, misuse, abuse, or alteration of the equipment. This warranty is extended only to the original purchaser, and a purchase receipt, invoice, or other proof of original purchase date will be required before warranty repairs are provided.

Mail in service can be obtained during the warranty period by calling (800) 840-0288 toll free. A Return Authorization number must be obtained in advance and can be marked on the outside of the shipping carton.

This warranty gives you specific legal rights and you may have other rights (which vary from state to state). If a problem with this product develops during or after the warranty period, please contact Channel Vision Technology, your dealer or any factory-authorized service center.

INSTRUCTIONS

C-1333

Security System Phone Line Interface

 **CHANNEL VISION™**
CENTRAL

©2006 CHANNEL VISION TECHNOLOGY

The **C-1333** provides a telephone line interrupt, to allow security systems to seize the phone line and dial the alarm company. Unlike many competitive products that use a spring loaded connector to engage the interrupt circuit, the C-1333 utilizes a two-position switch slide switch. This ensures rugged and reliable performance.

Features:

- Two position slide switch
- Add RJ-31X function to any phone distribution system
- Easy to instal
- Cost effective

Note: Use a 110 tool to connect wires to the punchdown connectors. Using an improper tool will damage the connectors.

Using the C-1333

When the service jack is engaged it interrupts the phone line to allow an alarm panel to seize the telephone line allowing it to call out when there is an emergency. The security port can be engaged and disengaged by changing the position of the slide switch located to the right. When this switch is in the “NORM” position, the security system will be in the circuit. When this switch is in the “BYP” position, the security system will be bypassed.
