

6.5" In-Ceiling Speaker

IC615

Channel Vision's Aria 6.5" high performance in-ceiling speaker features high power handling capability providing true stereo sound quality, not simply background music. The Aria 6.5" high performance in-ceiling speaker features a modern design enhanced by a paintable grill which covers all of the speaker frame using magnets. This discrete edge-to-edge grill has an ultra thin design that allows the speaker to be practically hidden in the ceiling, making the Aria 6.5" high performance in-ceiling speaker perfect for whole house audio or home theater applications. High quality materials ensure a long life and great performance. Silver speaker wire terminals not only provide better contact surface but also offer less resistance to signal transfer for spacious sound performance.
